Server information	Apache
Responsive	True
Server OS	Unknown

## Threat level

# **Acunetix Threat Level 2**

One or more medium-severity type vulnerabilities have been discovered by the scanner. You should investigate each of these vulnerabilities to ensure they will not escalate to more severe problems.

## User credentials are sent in clear text

Severity	Medium
Reported by module	/Crawler/12-Crawler_User_Credentials_Plain_Text.js

#### Description

User credentials are transmitted over an unencrypted channel. This information should always be transferred via an encrypted channel (HTTPS) to avoid being intercepted by malicious users.

#### **Impact**

A third party may be able to read the user credentials by intercepting an unencrypted HTTP connection.

## Recommendation

Because user credentials are considered sensitive information, should always be transferred to the server over an encrypted connection (HTTPS).

#### Affected items

#### **Web Server**

#### Details

Forms with credentials sent in clear text:

· http://actecnomatica.isp.cupet.cu/login

```
Form name: <empty>
Form action: http://actecnomatica.isp.cupet.cu/login
Form method: POST

# Vulnerable JavaScript libraries

Severity	Medium
Reported by module	/httpdata/javascript_library_audit_external.js

# Description

You are using one or more vulnerable JavaScript libraries. One or more vulnerabilities were reported for this version of the library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

#### **Impact**

Consult References for more information.

#### Recommendation

Upgrade to the latest version.

#### Affected items

#### Web Server

#### Details

- jquery 1.11.0
  - URL: http://code.jquery.com/jquery-1.11.0.min.js
  - Detection method: The library's name and version were determined based on the file's CDN URI.
  - References:

# Olickjacking: X-Frame-Options header

Severity	Low
Reported by module	/httpdata/X_Frame_Options_not_implemented.js

#### Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server did not return an **X-Frame-Options** header with the value DENY or SAMEORIGIN, which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into untrusted sites.

#### **Impact**

The impact depends on the affected web application.

#### Recommendation

Configure your web server to include an X-Frame-Options header and a CSP header with frame-ancestors directive. Consult Web references for more information about the possible values for this header.

#### References

The X-Frame-Options response header (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Frame-Options)

Clickjacking (https://en.wikipedia.org/wiki/Clickjacking)

OWASP Clickjacking (https://cheatsheetseries.owasp.org/cheatsheets/Clickjacking\_Defense\_Cheat\_Sheet.html)

Frame Buster (https://stackoverflow.com/questions/958997/frame-buster-buster-buster-code-needed)

# ① Cookies without HttpOnly flag set

Severity	Low
Reported by module	/RPA/Cookie_Without_HttpOnly.js

# Description

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

#### **Impact**

Cookies can be accessed by client-side scripts.

# Recommendation

If possible, you should set the HttpOnly flag for these cookies.

# Affected items

# Web Server

# Possible sensitive directories

Severity	Low
Reported by module	/Scripts/PerFolder/Possible_Sensitive_Directories.script

# Description

One or more possibly sensitive directories were found. These resources are not directly linked from the website. This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

# **Impact**

These directories may expose sensitive information that could help a malicious user to prepare more advanced attacks.

#### Recommendation

Restrict access to these directories or remove them from the website.

#### References

# Content Security Policy (CSP) not implemented

Severity	Informational
Reported by module	/httpdata/CSP_not_implemented.js

#### Description

GET / HTTP/1.1

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for the all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

```
Content-Security-Policy:

default-src 'self';

script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

#### **Impact**

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

# Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.

# ① Email addresses

Severity	Informational
Reported by module	/target/404_text_search.js

## Description

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

#### **Impact**

Email addresses posted on Web sites may attract spam.

#### Recommendation

Check references for details on how to solve this problem.

# File uploads

Severity	Informational
Reported by module	/Crawler/12-Crawler_File_Upload.js

#### Description

These pages allows visitors to upload files to the server. Various web applications allow users to upload files (such as pictures, images, sounds, ...). Uploaded files may pose a significant risk if not handled correctly. A remote attacker could send a multipart/form-data POST request with a specially-crafted filename or mime type and execute arbitrary code.

#### **Impact**

If the uploaded files are not safely checked an attacker may upload malicious files.

#### Recommendation

Restrict file types accepted for upload: check the file extension and only allow certain files to be uploaded. Use a whitelist approach instead of a blacklist. Check for double extensions such as .php.png. Check for files without a filename like .htaccess (on ASP.NET, check for configuration files like web.config). Change the permissions on the upload folder so the files within it are not executable. If possible, rename the files that are uploaded.

#### Affected items

# **(i)** Insecure Referrer Policy

Severity	Informational
Reported by module	/httpdata/insecure_referrer_policy.js

# Description

Referrer Policy controls behaviour of the Referer header, which indicates the origin or web page URL the request was made from. The web application uses insecure Referrer Policy configuration that may leak user's information to third-party sites.

## **Impact**

In some situations, an attacker may leak a user's private data

#### Recommendation

Consider setting Referrer-Policy header to 'strict-origin-when-cross-origin' or a stricter value

#### References

Referrer-Policy (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Referrer-Policy)

## Affected items

# Javascript Source map detected

Severity	Informational
Reported by module	/httpdata/sourcemap_detection.js

# Description

Client side Javascript source code can be combined, minified or compiled. A source map is a file that maps from the transformed source to the original source. Source map may help an attacker to read and debug Javascript.

#### **Impact**

Access to source maps may help an attacker to read and debug Javascript code. It simplifies finding client-side vulnerabilities

# Recommendation

According to the best practices, source maps should not be accesible for an attacker. Consult web references for more information

# References

<u>Using sourcemaps on production without exposing the source code (https://itnext.io/using-sourcemaps-on-production-without-revealing-the-source-code-%EF%B8%8F-d41e78e20c89)</u>

## **(i)** No HTTP Redirection

Severity	Informational
Reported by module	/target/http_redirections.js

#### Description

It was detected that your web application uses HTTP protocol, but doesn't automatically redirect users to HTTPS.

#### **Impact**

In some circumstances, it could be used for a man-in-the-middle (MitM) attack

#### Recommendation

It's recommended to implement best practices of HTTP Redirection into your web application. Consult web references for more information

### References

# Password type input with auto-complete enabled

Severity	Informational
Reported by module	/Crawler/12-Crawler_Password_Input_Autocomplete.js

## Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

# **Impact**

Possible sensitive information disclosure.

#### Recommendation

The password auto-complete should be disabled in sensitive applications.

To disable auto-complete, you may use a code similar to:

<INPUT TYPE="password" AUTOCOMPLETE="off">

#### Affected items

# Web Server

# Details

Pages with auto-complete password inputs:

· http://actecnomatica.isp.cupet.cu/login

```
Form name: <empty>
Form action: http://actecnomatica.isp.cupet.cu/login
Form method: POST
Password input: password
```

• http://actecnomatica.isp.cupet.cu/user/profile

```

# Subresource Integrity (SRI) not implemented

Severity	Informational
Reported by module	/RPA/SRI_Not_Implemented.js

#### Description

Subresource Integrity (SRI) is a security feature that enables browsers to verify that third-party resources they fetch (for example, from a CDN) are delivered without unexpected manipulation. It works by allowing developers to provide a cryptographic hash that a fetched file must match.

Third-party resources (such as scripts and stylesheets) can be manipulated. An attacker that has access or has hacked the hosting CDN can manipulate or replace the files. SRI allows developers to specify a base64-encoded cryptographic hash of the resource to be loaded. The integrity attribute containing the hash is then added to the <script> HTML element tag. The integrity string consists of a base64-encoded hash, followed by a prefix that depends on the hash algorithm. This prefix can either be sha256, sha384 or sha512.

The script loaded from the external URL specified in the Details section doesn't implement Subresource Integrity (SRI). It's recommended to implement Subresource Integrity (SRI) for all the scripts loaded from external hosts.

#### **Impact**

An attacker that has access or has hacked the hosting CDN can manipulate or replace the files.

#### Recommendation

Use the SRI Hash Generator link (from the References section) to generate a <script> element that implements Subresource Integrity (SRI).

For example, you can use the following <script> element to tell a browser that before executing the https://example.com/example-framework.js script, the browser must first compare the script to the expected hash, and verify that there's a match.

```
<script src="https://example.com/example-framework.js"
integrity="sha384-oqVuAfXRKap7fdgcCY5uykM6+R9GqQ8K/uxy9rx7HNQlGYl1kPzQho1wx4JwY8wC"
crossorigin="anonymous"></script>
```
